

South Grampian and Southeast Highlands

Including South and East Cairngorms National Park, Aberdeenshire and Angus Hills, Ben Vrackie, Ben Lawers, Loch Tay and Ochils

Forecast valid from 00:00 on Tuesday 29 Mar 2022 until 23:59 on Wednesday 30 Mar 2022

Forecast Issued on Monday 28 Mar 2022 at 14:35 by Met Office Aberdeen

Confidence: High confidence for a return to wintry conditions on the hills, with wintry showers most days and blustery northerly winds at times, a significant wind chill can be expected. Lower confidence in frequency of snow showers and accumulations expected with the potential for some grouping of showers to give longer periods of snowfall.

Headline for Tuesday 29 Mar 2022: Outbreaks of snow from late morning, drier by late afternoon, further wintry showers later in the evening.

Forecast for Tuesday 29 Mar 2022

Weather: Mostly clear overnight and in the morning period, although some morning mist is possible. Cloud will spill south during the morning and thicken over the area. Outbreaks of rain or sleet will reach the southern Cairngorms by mid morning and continue to spread south and west, these will turn increasingly wintry above 400m. It will become drier later in the afternoon with some cloud breaks and brightness returning but feeling colder and by late evening a few snow showers may push down from the north.

Chance of cloud-free hill tops above 800m: 90% falling to 50% by lunchtime but improving to 90% again by late afternoon, increase in low cloud associated with frontal precipitation moving south across Scotland.

Low Cloud and visibility: Mainly cloud free around dawn with good early visibility for most ranges, cloud will lower from the north during the morning with bases falling to 5-600m widely by late morning as frontal sleet and snow moves south. Visibility will turn poor or very poor for a time as the sleet and snow spreads south. Some breaks will develop where it clears up a little and by late afternoon cloud will lift and break with the summits becoming mostly clear by evening and visibility becoming very good in the fresh northerly airstream. Visibility may dip again in any late evening showers with cloud bases also dipping back to 600m temporarily.

Met Office Aberdeen Meteorologist's View

Note the fall in freezing level and the change in wind chill effect with during the day with a real change back to winter conditions on all ranges by the end of the day. Although winds won't be very strong they will significantly enhance the chill effect and snow accumulations, although not large will make walking conditions harder.

Forecast for Wednesday 30 Mar 2022

Weather: Wintry showers expected throughout, potentially merging into a longer spell of snow, fewer showers for the Perthshire Hills, around Loch Tay and the Angus Glens. Outwith showers some bright or sunny weather expected. Cold northerly winds become gusty in or near showers which may cause temporary blizzard conditions higher on the munros.

Maximum wind: Northerly 15mph with gusts 25mph but perhaps 30mph around showers.

Chance of cloud-free hill tops above 800m: 70%, most lower cloud will be in association with showers,

Low Cloud and visibility: Cloud will temporarily become scattered or broken above 600m in snow showers perhaps lower if more intense snow showers form. Visibility will become very poor in showers and perhaps temporary whiteout conditions on the higher summits in heavier showers, outwith showers visibility very good in the cool northerly airstream.

Temperature: **Glens:** Minus 2 rising to 3 Celsius.
At 800m: Minus 6 rising to Minus 3 Celsius.
Freezing level: 100m rising to 400m before falling again to 200m.
